

Supply Chain Management

Who is in a supply chain?

A supply chain is a team of organizations, not one company acting alone.

**Supply chain managers
coordinate the activities across
this end-to-end chain**

That means business decisions: cost, speed, quality, flexibility, risk, sustainability, and customer experience.

What SCM looks like at Rawls

SCM + Rawls

The program aims to build career-ready skills through courses, student organizations, career counseling and internships

Rawls SCM prepares students to:

- ✓ Lead roles in
 - Planning – supply and demand
 - Sourcing
 - Operations
 - Logistics
 - Technology
 - Risks
- ✓ Build critical thinking and analytical skills
- ✓ Solve problems using various approaches

Job Placement Rate: 100% (2024–25)

Classes you might take

SCM + Rawls

Courses connect business foundations with SCM-specific decision-making.

Business foundation

Marketing • Finance • Business law • Managing people • Business communication

SCM core

Supply Chain & Operations Management • Business Process Improvement

Plan & control

Forecasting and Inventory Management

Move & connect

Transportation & Distribution Management

Source globally

Global Sourcing

Lead strategy

Supply Chain Strategy capstone

Skills SCM majors build

SCM is a strong fit for students who like puzzles, people, data, and impact.

Analytics

read data and forecasts

Problem-solving

make tradeoffs under pressure

Communication

explain decisions clearly

Negotiation

work with suppliers and partners

Technology

use AI, dashboards, and systems

Global thinking

manage cross-border complexity

Career paths in SCM

The field has many entry points and paths upward. Examples:

PLAN

Demand planner
Inventory analyst

SOURCE

Buyer/Supply Planner
Procurement specialist

MAKE

Production planner
Operations supervisor

MOVE

Logistics analyst
Distribution manager

IMPROVE

Process analyst
Lean improvement
Emerging Supply Chain
Technologies Specialist

LEAD

Supply chain manager
Operations manager
SC Regional head

The future of SCM

The field is changing fast - which makes it exciting.

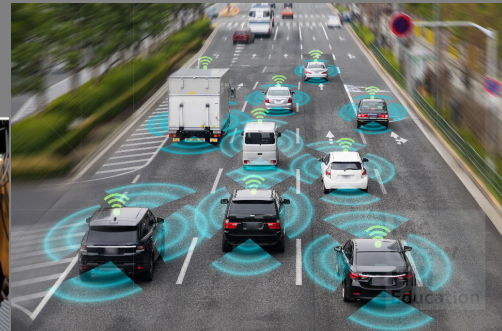

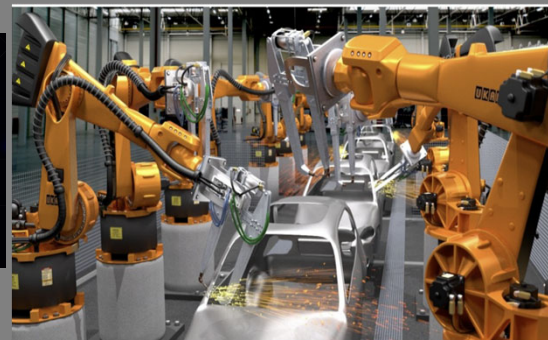

AI + Analytics

Automation + robotics

Resilience + risk management

Sustainability + circular economy

Cybersecurity

Future SCM leaders will blend People – Process - Technology.

Supply chain thinking goes way beyond products

Anything that flows through a network — sourced, transformed, and delivered — can be run like a supply chain.

Talent supply chain

People get sourced, developed, and deployed. Companies forecast the skills they'll need, then recruit, train, place, and retain — building a workforce before they need it.

Information supply chain

Raw data is sourced, cleaned, combined, and delivered to a decision. "Freshness" and quality matter just like food — bad data spoils the outcome.

Space supply chain

Launch logistics, satellites, refueling, and in-orbit servicing — getting materials to orbit and back. The newest and hardest supply chain of all.

Finance / cash supply chain

Cash flows like materials: match cash supply with cash demand, rate each source by reliability and speed (a hospital treats volatile Medicaid like an unreliable supplier), and use lean to keep cash from getting "stuck"

Same five questions — Plan → Source → Make → Deliver → Return — on a brand-new playing field.

SCM may be a good fit if you like...

SCM + Rawls

No single personality type. The major welcomes different strengths.

Puzzles

figuring out how pieces connect

People

working with teams and suppliers

Data

using numbers to make decisions

Action

seeing real-world impact

Travel/global business

connecting across places

Improvement

making processes better

A useful question: “Do I enjoy solving practical problems that affect real people?”

Where our SCM majors work

Every industry needs SCM majors. A few examples of employers who recruit our students
